

Quality Control Standards — Brookhaven Dairy Processing Facility

Madison, WI · Document ID: BDP-QC-001 · Revision 2 · Effective 20 Mar 2026

Document ID	BDP-QC-001	Revision	2
Plant	Brookhaven Dairy Processing Facility	Effective Date	20 Mar 2026
Document Owner	P. Mendez, QA Supervisor	Classification	Controlled — Quality

1. Purpose & Scope

This standard governs quality control for fluid milk, cream, and cultured products at Brookhaven Dairy Processing Facility. It supports the Food Safety Plan, the HACCP plan, and Grade A PMO compliance.

2. Product Specifications

Product	Key Attributes	Specification Reference
Pasteurized milk (2%)	Fat %, SCC, antibiotic, phosphatase	≥1.95% fat; phosphatase negative; antibiotic negative.
Heavy cream	Fat %, viscosity, microbial	≥36% fat; coliform <10 CFU/mL.
Cultured (yogurt)	Live culture count, pH, fat	≥10 ⁷ CFU/g culture; pH 4.0-4.6.

3. Procedures

3.1 Raw Milk Receiving

Every tanker sampled for antibiotic residue (Charm SL3 or equivalent) and SCC. Failed tankers rejected and the supplier notified per QA-BDP-RAW-01.

3.2 Pasteurization Verification

Phosphatase test on every batch within 30 minutes of pasteurization completion. Positive result halts distribution and triggers a recall readiness review.

3.3 Finished Product Release

QA releases each lot after micro and chemistry results are within spec. Lots without complete data are held under 'Quarantine' status in SAP.

3.4 Allergen Control

Production schedule sequenced to minimize allergen carryover. Validation swabs after every full clean; ATP and protein-specific lateral flow tests.

4. Out-of-Specification Handling

Any OOS result triggers an immediate Hold on the affected lot, a documented investigation, and where applicable, a CAPA. Disposition decisions (Release, Rework, Reject) require QA approval. The investigation is closed in the eQMS with full traceability per the site's records retention policy.

5. Roles & Responsibilities

Quality Assurance (P. Mendez, QA Supervisor) owns lot release. Operations executes per the recipe and reports deviations. Maintenance supports calibration of QC-critical instruments per the linked maintenance manual (BDP-MNT-001). The site safety procedure (BDP-SAF-001) applies to all QC laboratory activity.
